

Division I Educational Document: June, July, August Restriction for Camps/Clinics

Proposal:

To restrict the area, time period, and frequency of hosting institutional camps/clinics and participation in privately owned camps/clinics for departmental staff members with specific responsibility in the sport of volleyball as specified:

- Area
 - On an institution's campus,
 - Within the states of the institution's campus, or
 - Within a 50 miles radius of the institution's campus, if the 50 miles radius extends into another state
- Time Period – Conducted in the months of June, July or August or any calendar week (Sunday through Saturday) that includes days of those months
- Frequency – Limited to two 15 consecutive day periods (on file in the Athletics Director's Office)
- Participation in privately owned camps/clinics is limited to the two declared 15 day periods

Rationale In Support of Proposal:

- The exposure and familiarity afforded to the experience of working camps/clinics is a recruiting activity. Implementing a change of this magnitude will cease coaches from involving themselves in camp/clinic activity that is specifically manufactured to gain exposure with a prospect or group of prospects.

Rationale Opposed to Proposal:

- Eliminating this exception may prevent coaches who are looking to supplement their salaries from coaching with outside income.
- Volleyball exposure in "underserved areas" could be harmed if coaches are not allowed to conduct satellite camps. This would hinder our ability to promote the sport in these areas.
- Being able to secure facilities can be difficult and often times you run a clinic whenever the facility is available.
